WELCOME.

GREEN EFFICIENT LIVING

Green Efficient Living was established in 2013 with the vision to create a company that can provide high quality work and services.

Brothers Mitch and Kody Toeroek identified a need in the industry for a business that can provide a high level of service that is second-to-none without the need to dramatically inflate their prices, use budget products, compromise their values or use contractors to complete their services.

Through strategic office practices, stable and continuous relationships with manufacturers, a successful business model and a team that strives to work hard for each other, Green Efficient Living has successfully proven that it is possible for a company to provide an elite standard of service at an affordable price.

OUR BUSINESS.

Green Efficient Living is a young, vibrant company with an aspiration to revolutionise the way that South Australian residents and businesses utilise their energy.

Our knowledgeable and experienced team are driven by the desire to provide our customers with products and services that significantly reduce their energy bills and their impact on the environment.

We work hard for one another and always endeavour to carry out a high standard of work.

With over 20 years experience, we pride ourselves on our knowledge and expertise, but we always aim to keep learning and developing by utilising the latest technology and innovation.

Image: Brightgreen

OUR MISSION

To reduce our clients' energy bills by providing high quality products and a transparent and honest service.

OUR VISION

To revolutionise the way that South Australian homes and businesses utilise their energy.

OUR GUARANTEE

We will not sell you an inferior product just to get your business. The products that we offer to you are those that we have installed in our own homes and business. This is our guarantee to providing quality goods, service and workmanship.

OUR TEAM.

Green Efficient Living technicians are all in house and employed by us. We do not contract other companies to complete our work and therefore have the ultimate control over our products, services and results. Our technicians are all fully compliant with all current regulations and understand the standard of work that we expect from them.

Having a team of 20+ technicians means that we can provide a seamless installation without the need for a third party installer. Communication is simple and our services are more affordable meaning nothing gets lost in translation and the whole process is made easier. *When you choose GEL, you work with GEL.*

MITCH TOEROEK Director/Air Conditioning

Mitch is a qualified refrigeration mechanic who is passionate about designing and installing systems for both residential and commercial dwellings.

He is continuously seeking new products and systems that ensure value for money whilst also maintaining aesthetics and sustainability for the future.

KODY TOEROEK Director/Solar & Electrical

Kody is a qualified electrician and a Clean Energy Regulator solar inspector. He has an open registration data license and has completed a solar grid and off-grid connection design and installation course.

He is passionate about energy management and is always looking to improve the way that houses and businesses utilise their energy more efficiently.

ADAM BALDWIN Service & Installation Manager

Adam is a qualified refrigeration mechanic with 12 years of on-site experience. His knowledge and professionalism have earned him a management role within our company. No longer a Senior Technician, Adam now works as our Service and Installation Manager, directing our installations and technicians, and liaising with clients from both within the office and on site.

We use an advanced cloud-based software that allows us to maintain consistent communication with our staff and clients. We complete all facets of our work through this software from intricately designing, quoting and invoicing jobs in the office, to our tradesmen documenting and auditing stage processes on site. We also send out SMS alerts and job status updates to all of our clients and customers to inform them of exactly what stage of the process we are at, keeping them completely up-to-date.

HOW WE GET IT RIGHT.

Our design and quoting program allows us to obtain the most accurate system for the home or office layout provided. It has enabled us to speed up the process and return quotes as quickly as possible, while almost completely minimising human error.

TECHNOLOGICALLY DESIGNED

We use the latest in computer design software to ensure that your system is designed to the highest possible standards. We have found that implementing this software significantly minimises any human error that may occur throughout the process.

The software also allows us to demonstrate an exact replica of the finished product. By using the layout and exact measurements of the rooms, we can design a system that minimises extra costs and wasted products.

Because of this, our team are completely prepared when we arrive on site, our labour and product costs are minimised, and the system has been designed to fit seamlessly and comfortably into the space provided.

WHY CHOOSE GEL?

EFFICIENT

All of our business processes have allowed us to maintain an efficient service from start to finish.

By utilising online systems we can send you quotes, invoices and system designs immediately and accurately. This minimises delay from the start and helps to maintain an easy build throughout.

We work efficiently and collaboratively with all other trades to make sure the build progresses as quickly and easily as possible, and minimises the time that you need to be on site.

INTERNAL

Green Efficient Living technicians are all in-house and employed by us. We do not utilise contracted companies to complete our work for us and therefore have complete control over the end result.

Our technicians are fully compliant with all regulations and understand the standard of work that is expected. As we know our installers better than anybody, you can be guaranteed to get the best man for the job. We currently have 20+ technicians on the road each day so you can be sure that no matter where or when you need us, we are available.

By employing our own installers, we are able to keep our costs lower than our competitors, while ensuring that our end results are of a higher standard.

CREDIBLE

All of our tasks are audited, from the smallest of service calls, right up to the largest of commercial installations. It is compulsory that our technicians complete these job audits at every stage of the process to ensure that the entire job has been completed to the highest standard possible.

We also make sure that our tradespeople document every stage of the process with task notes and photographs. This adds extra credibility to our installations and provides a visual aid when referencing any insurance/warranty issues that the system might have. It also keeps our tradesmen accountable and honest with every system they install.

As a builder, this provides you with proof of how the system existed both before and after our installation. These photographs also ensure that our industry-leading standards are met and exceeded and that there is proof of every stage of our work being completed.

OUR PROCESS.

Green Efficient Living have worked hard to create business processes that have allowed us to maintain an efficient process from start to finish.

When the first contact is made, we make it our top priority to make sure that the process is as seamless and easy as possible for you at your end.

We maintain consistent communication throughout the whole installation, so you never have to question how it is progressing.

Efficient isn't just our middle name, but one of our company values as well.

QUOTATION REQUEST RECEIVED.

We receive your quotation request containing details such as the site name, number, address, and any specific site requests. Once we enter this into our system, you will receive an email notifying you that your quotation request has been received.

QUOTATION TAILORED TO SPECIFIC SITE.

From here, we design tailored quotes for each individual, ensuring that the system recommended is as energy efficient and cost effective as possible. The quotation is then forwarded to yourself as the client and we then await approval or any amendments required. Quotation is then approved.

WORK COMMENCES.

With dates specified by yourself, we work within your schedule, ensuring that all building deadlines are met. First fixes are completed on time and partial invoices are then forwarded.

EMAIL CORRESPONDENCE.

Consistent communication is maintained throughout the entire process ensuring that you are kept up-to-date with our progress. This minimises required site visits by your supervisors.

INVOICE SENT.

All work is completed by the date specified. All systems are commissioned and put through our rigorous test cycle before leaving site and all final invoices are sent.

OUR SERVICES.

AIR CONDITIONING.

DESIGN INSTALLATION MAINTENANCE

Our ongoing and professional development gives us a thorough understanding of continuously changing environments and system designs and allows us to be one step ahead of our competitors.

We use the latest in computer design software to ensure that the system is designed to be as efficient as possible.

Our business processes not only allow us to complete residential installations to the highest quality, but commercial as well.

SOLAR.

DESIGN
INSTALLATION
MAINTENANCE

Our solar design and installation team is directed by one of South Australia's most knowledgeable and professional installers. Kody Toeroek is a government inspector who routinely performs inspections on systems throughout all of South Australia. You can be assured that with his eye for detail and quality control, all installations under his management are of the highest quality and standard.

ELECTRICAL.

**DESIGN
INSTALLATION
MAINTENANCE AND SAFETY**

As a young team, we are always excited to push the boundaries of what your modern electrical components can do. We have aligned ourselves with businesses whose values are the same as ours and our dedication to safety and quality means that every job is performed to the highest standard. At Green Efficient Living, we employ our own electricians so that we can complete refrigeration and solar installations without the need for contractors.

While most companies utilise outside electricians to finish their installations, GEL are there from start to finish.
